SUMMARY

Staff Software Engineer with nine years building and scaling production TypeScript applications for startups and enterprise clients. Owns technical direction end to end: architecture and data modelling, API design, frontend systems, deployment and production support. React and Next.js on the front, Node.js and Express over PostgreSQL behind, with REST and GraphQL APIs secured by JWT, OAuth 2.0 and role-based access control. Builds shared component libraries documented in Storybook and delivers production interfaces to WCAG accessibility standards. Sets and holds a testing standard across unit (Vitest, Jest, React Testing Library) and end-to-end (Playwright, Cypress). Works AI-first with Claude Code and Cursor as a daily part of delivery, applying the same review standard to generated code as to any other contribution. Leads technical decisions, reviews code and mentors engineers across distributed, cross-time-zone teams.

SKILLS

Languages and Core: TypeScript, JavaScript (ES6+), HTML5, CSS3

CSS and Styling: Hand-written CSS3 including Flexbox, Grid, custom properties and media queries; WCAG accessibility; responsive and cross-browser layout; performance and bundle size; Tailwind CSS; Material UI

Frontend: React, Next.js, Vue.js, Angular, React Context, TanStack Query, Redux and Redux Toolkit, jQuery and legacy vanilla JavaScript

Design Systems: Shared component libraries, Storybook documentation, reusable UI architecture

Testing: Playwright, Vitest, Jest, React Testing Library, Cypress, Enzyme

Build and DevOps: Vite, Docker, CI/CD pipelines, Git and GitHub, Bitbucket, Vercel, Heroku

Backend and APIs: Node.js, Express.js, REST APIs, GraphQL, WebSockets and Socket.IO, Microservices, PostgreSQL, MongoDB, Redis, Ruby on Rails

Integrations and Auth: Stripe, Firebase, Supabase, Google Maps, push notifications, JWT, OAuth 2.0, Role-Based Access Control

AI-Assisted Development: Claude Code, Cursor, GitHub Copilot, used as a daily delivery workflow with review and verification of everything generated

Mobile: React Native, BLE (Bluetooth Low Energy), App Store and Play Store releases, Ionic

EXPERIENCE

Staff Software Engineer Sep 2026 – Present

Independent · Remote · Canada-based clients

- Own technical direction and architecture across concurrent client engagements, from data model and API design through to deployment on Docker and CI/CD pipelines, scaling and production support.
- Set and hold the standard for code quality, testing and release on every project delivered.
- Advise clients on technical trade-offs and translate business requirements into system design.

Senior Software Engineer May 2022 – Aug 2026

Independent · Remote · Canada-based clients

- Built production web applications in TypeScript with React and Next.js front ends, backed by Node.js and Express services on normalized PostgreSQL schemas, secured with JWT and OAuth 2.0.
- Designed and maintained shared component libraries documented in Storybook, keeping UI consistent as products and teams grew.
- Delivered interfaces to WCAG accessibility standards and wrote hand-rolled responsive CSS rather than relying on a framework to hide layout problems.
- Integrated new products into existing mature systems and third-party APIs including payments, maps, authentication and messaging, working from source code where documentation did not exist.
- Used Claude Code and Cursor as a core daily part of the workflow, reviewing generated code to the same standard as any other contribution.

Senior Software Engineer Aug 2021 – May 2022

Nisum · Remote

- Delivered responsive, cross-browser interfaces to WCAG accessibility standards, improving usability across the product.
- Built enterprise-grade applications in TypeScript with React, Angular, Node.js and GraphQL.
- Rolled out CI/CD pipelines on GitHub and authored integration tests with Jest, partnering with globally distributed teams across time zones.
- Mentored junior developers and enforced clean-code practices through code review and pair programming.

Software Engineer to Senior Software Engineer Jan 2019 – Aug 2021

Devsinc · Lahore

- Led development of cross-platform web and mobile applications using React, Angular, React Native, Node.js and Ruby on Rails.
- Maintained and extended legacy jQuery and vanilla JavaScript interfaces on client products alongside new React and Angular development.
- Integrated third-party services including Stripe, Google Places and Firebase across web and mobile products.
- Engineered modular, reusable UI systems following DRY and SOLID principles to minimize refactoring.
- Turned proofs of concept into production systems and drove Agile ceremonies: sprint planning, retrospectives, backlog grooming and QA coordination.

Software Engineer May 2018 – Jan 2019

Codexia Technologies · Lahore

- Built hybrid mobile applications with Ionic and Angular, delivering consistent UX across Android and iOS.
- Shipped Firebase-powered authentication and real-time features for QuitFix, Kodeec and Cambuz.
- Performed manual QA across platforms, reducing production defects.

Front End Developer Sep 2017 – Jan 2018

Narsun Studios · Lahore

- Engineered the UI for large-scale live stadium experiences (Xcite Interactive) using Angular, Firebase and PubNub.
- Enabled real-time audience engagement through frontend and backend synchronization with Express.js.

SELECTED PROJECTS

Prologis: Real-estate management platform for sale, rental and lease operations with logistics, measurements and legal-compliance modules, built with an accessibility-first UI delivered to WCAG standards. *React, Node.js, GraphQL*

Roxova: Enterprise media-licensing platform with built-in legal and compliance handling for owned and third-party content, plus a pre-licensed content library. *Next.js, React, Node.js*

AnaNinja: Enterprise retail-management platform covering inventory, warehousing, delivery, payments, returns and wishlists. *Vue.js, React Admin, Google Maps, Material UI*

Go Boon: Referral and candidate-matching platform aggregating job postings from multiple external systems and APIs into personal and corporate profiles. *Angular, React, React Native, Ruby on Rails*

Run Buddy: Pet-fitness app with trainer scheduling, activity tracking, pet profiles, chat and Stripe payments. *React Native, Ruby on Rails, Stripe*

Klaro: Connected-device mobile app monitoring humidor temperature and humidity with personalized alerts. Architected the React Native app for iOS and Android, built the BLE layer for pairing, sensor reads and reconnection handling, and managed App Store and Play Store releases. *React Native, Redux, Ruby on Rails, BLE, Shopify*

EDUCATION

BS, Software Engineering · University of the Punjab (PUCIT), Lahore 2013 – 2018
